Lorenzo Meola

AI PRODUCT ENGINEER

✉ lorenzomeolav32@gmail.com ☎ +32 0456 154 408 ⚑ Belgium

CORE SKILLS

- AI Coding Agents (Claude Code / Codex)
- Prompt Engineering & AI Workflows
- Model Selection (Claude/OpenAI/Gemini)
- Python (read & validate)
- React (read & validate)
- SQL (intermediate)

AI & DEV STACK

- Claude Code / Codex / GitHub Copilot
- Claude, OpenAI, Gemini & open-source LLMs
- Agentic & 100% AI-assisted workflows
- Python & React (read, reason, validate)
- REST APIs, FastAPI, HTML / JS / CSS
- Git & rapid product iteration

EDUCATION

MSc, Artificial Intelligence & Machine Learning
MIA Digital University, Barcelona · 2022–2023

BSc, Automotive Engineering
Politecnico di Torino, Italy · 2018–2021

CERTIFICATES

- SQL Certification
- IELTS — Level B2 (2018)

LANGUAGES

English	C1
Spanish	C2
Italian	B2

INTERESTS

- Building real products with LLMs
- AI-assisted, agentic development
- Product impact & user outcomes
- New AI-native work methodologies
- Health & human-centred technology

PROFILE

I build real products **with** AI instead of writing every line by hand. Most of my day is spent working with AI coding agents (Claude Code, Codex, Copilot): I design the solution, guide the agent, then read and reason about the Python and React it produces to check that it is correct. I pick the model that fits the job (Claude, OpenAI, Gemini or open source) depending on cost, speed and how much reasoning the task needs. My background is an MSc in AI/ML, but I treat the technology as a means to an end: what I care about is moving real metrics and making things better for the people who use the product. Right now I build internal tools and data products for my team this way, which lets me go from an idea to working software much faster than writing it by hand.

WORKING EXPERIENCE

Technical Analyst & AI Tooling Developer
Jan 2026 – Present
Volvo Group

- Build internal tools and data products for my team by working through Claude Code and Codex, designing and validating the solution rather than writing the code line by line.
- Pick the LLM that fits each task (Claude, OpenAI, Gemini or open source), weighing cost, speed and how much reasoning it needs.
- Develop Python/FastAPI apps and SQL pipelines that turn raw fleet data into something the team can use, reading and validating all the AI-generated code myself.

Technical Support Engineer
Feb 2023 – Dec 2025
Volvo Group

- Provided worldwide technical support to dealers on ECU programming, diagnostics and electronic system repair.
- Solved complex technical problems under time pressure and communicated solutions clearly across global teams.

Product Developer
Sep 2022 – Dec 2022
De Metálicos

- Developed and designed metal products using CAD tools, iterating quickly from concept to manufacturable design.
